

Quest 2: Bring me to life!

The purpose of this quest is to add life and game-feel to your scene, so our Jump and Run game starts to feel like an actual game! This task assumes you added everything to your game that we've done during the labs (e.g. added the animations for walking and jumping, etc.)

More life to the character! (2p)

Now that our little mage can run and jump (physically and visually), he should also be able to let us hear about his sporty activities.

Tasks

Add the following sound effects:

- While the mage is walking/running, add a looping “Footsteps” sound effect.
- If the mage is jumping, play an according sound effect of your choice.
- Optional: Improve “Jumping” by using the different animations (start / idle / land) and add sound effects for both, jumping and landing.

More life to the enemies! (8p)

What is a Jump and Run game without enemies you can jump on?!

Next, go to the asset store or your favorite resource platform (like itch.io) and look for a rigged, humanoid character. Ideally it already includes a walking animation, or you can try adding your own (you can find lots of humanoid animations at <https://www.mixamo.com/>)

Tasks

- Add a moving (and visually walking) enemy to your scene.
- If the character jumps on the enemy, use tweens or custom animations to make the enemy squash and either go back to normal state or disappear.
- Add a fitting sound effect to this action (like a hit or a squash sound).

Hint: you don't have to use a humanoid enemy, but animating a character like a “Goomba” might be more complicated. If you find a fitting asset though, feel free to use it!

More life to the world! (5p)

Finally, let's make the world feel less static!

Tasks

- Create and use at least one particle effect of your choice to make the scene more vivid. This can, for example, be leaves coming from a tree or dust particles below the mage's feet while running, etc.
- Add background music to the scene.

Hint: You can also add new assets like a torch and give it some smoke particles. Be creative!
